Update on the Central Valley Unimpaired and Natural Flows

CWEMF Annual Meeting March 20-22, 2017 Folsom, CA

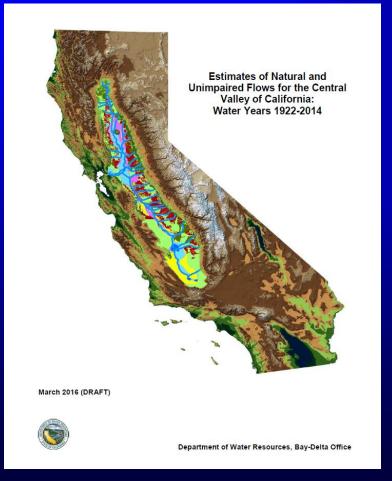

(Pop-up Session)

Guobiao Huang and Tariq Kadir Bay-Delta Office California Department of Water Resources

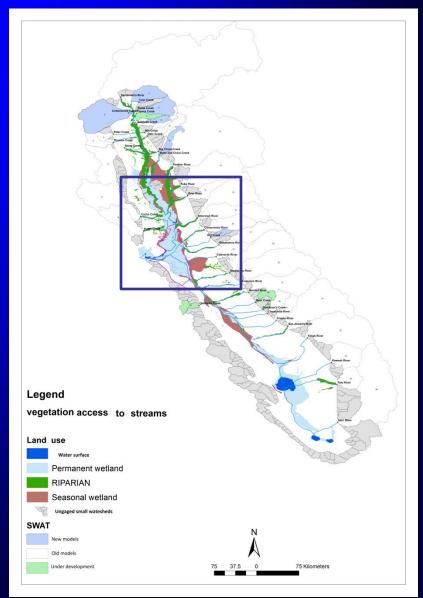

Draft Report published (March 2016) on the web

https://msb.water.ca.gov/documents/86728/a702a57f-ae7a-41a3-8bff-722e144059d6 (Just Google Natural Flow)

New Updates

- Both unimpaired flow (UF) and natural flow (NF) data were extended to WY2015 (WY1922-2015, UF monthly; NF daily).
- Rim watersheds: more SWAT models for the 36 rim inflow locations (Cow, Battle, Cottonwood creeks, etc.), now only 4 minor streams use USGS gauge data or related to nearby SWAT watersheds.
- Valley floor: C2VSim/IWFM-2015 daily stream kinematic wave routing to better simulate streamflow travel time and instream storage (e.g. Lake Shasta to Verona, ~3 days)
- 4. Better representation of natural flood basins (wetlands); Sensitivity of overflow threshold and channel capacity.
- New draft report to be released in June 2017. Submission of manuscript for journal publication soon.
